# SPRINT 2 DELIVERABLES

1. We have **integrated** our model to the flask application.

2. We have created **features.py file** to extract all the necessary features from the URL that the user inputs and use it further to predict it's state.) with a form field to get URL input from the user to check its genuineness. The home page also has other components expounding the serives we offer and the team.

3. We have create a separate **result.html** file to display the results.

## Example test cases:

1. Legitimate site - **https://www.google.com/**

## 2. Phishing site - 127.0.0.1
